

Assignment

AI-Powered Testing Mastery

Course: Gen AI Test Tool Developer [AI Agentic Workflows]

Topic: LangChain & LangGraph

Live Session Date: 21st March 2026

Using the Langflow-

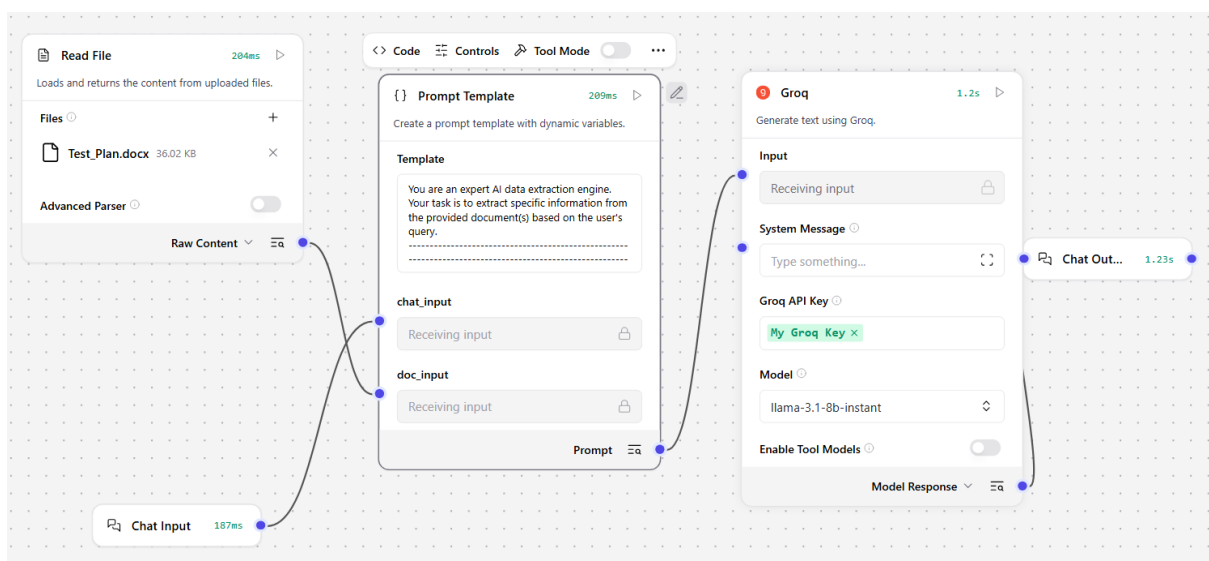

- **Develop a Workflow to read the document and extract the required data**
- We can add multiple documents.

Building a Langflow RAG-Style Extraction Pipeline

“Document Reader & Data Extractor”

Components of the Workflow:

1. **Files** = Context (unstructured data source)
2. **Chat Input** = Query / Extraction instruction
3. **Prompt Template** = Orchestration logic (VERY critical)
 - The **Prompt Template** is the *core intelligence layer* here.
 - It determines how accurately your workflow extracts data.
4. **LLM (Groq)** = Reasoning + Extraction
5. **Output** = Structured result

For the 3rd Component ‘Prompt Template’, the following prompt is used:

You are an expert AI data extraction engine.

Your task is to extract specific information from the provided document(s) based on the user's query.

 DOCUMENT CONTENT:

{doc_input}

 USER QUERY:

{chat_input}

 INSTRUCTIONS:

1. Carefully read the user query and understand what data needs to be extracted.
2. Analyze the document content thoroughly.
3. Extract **ONLY** the relevant information that directly answers the query.
4. If multiple documents are provided, combine and reconcile the information.
5. If the answer is not found, respond with: "Data not found in the provided document(s)."

 OUTPUT FORMAT RULES:

- Provide a clear, structured response
- Use bullet points or JSON format wherever applicable
- Do NOT include irrelevant text
- Do NOT hallucinate or assume missing data

 FINAL OUTPUT: Show **ONLY the Output; NOT the above prompt**

User Queries: To Validate the workflow, the following User Queries have been fed to the ChatBot:

1. Search Test Deliverables
2. Enlist only first 2 Test Deliverables

LLM Response to the following Queries : "Data not found in the provided document(s)."

3. What is your name?
4. Which LLM Model is used here
5. who won the T20 world cup?
